## **Abstract**

*These days, in which the Information and Communication technologies have changed the concept of knowledge or the management of information, the methodology used in classrooms is still mainly based on teaching how to solve fixed situations in a predefined way. This method is considered as the traditional teaching method and helps to develop basic skills. Lea Artibai college's strategy is to ensure that students acquire other skills as well, such as, interpersonal relations and group work skills, leadership skills and computing and language skills, which are necessary to succeed in a continually advancing and changing technological working environment. This paper explains how Lea Artibai has changed from a teaching methodology to a learning one with the help of a web based platform.*
